Personal Profile

Full Stack Engineer with 3+ years of production experience shipping AI-powered features on a SaaS platform used by 12 million+ users. Built and owns a customer-facing AI Agent system - a multi-LLM, tool-calling loop with persistent memory - embedded in a no-code automation platform with 1,500+ integrations. Specializes in agentic AI systems, MCP server development, event-driven architecture, and high-performance API design.

Skills

AI & LLM: Agentic AI Systems, Tool-Calling Loops, Persistent Memory Design, MCP Server Development, OpenAI API, Anthropic Claude API, Google Gemini API, Multi-LLM Provider Integration

Languages: JavaScript, TypeScript, PHP, Python, SQL

Frontend: React, Next.js, Redux, Tailwind CSS, HTML5, CSS3

Backend: Node.js (Express), PHP (Laravel), RESTful APIs, GraphQL, WebSockets, WordPress Plugin Architecture

Databases & Infrastructure: MySQL, PostgreSQL, Redis, ClickHouse, AWS, AWS Lambda

Tools: Git, GitHub, Jest, Webpack, npm/Yarn, Postman

Specializations: SaaS Architecture, Event-Driven Systems, Performance Optimization, API Design

Spoken Languages: English (Fluent), Hindi (Native), Marathi (Fluent)

Experience

April 2023 – Present: Full Stack Engineer

Brainstorm Force – Remote, India

OttoKit — No-code automation platform with 1,500+ integrations, used by 12 million+ users.

AI Agent & LLM Systems

- Architected and shipped a customer-facing **AI Agent** system — a multi-turn, tool-calling loop where the LLM autonomously selects from 1,500+ integration actions, executes them, processes results, and loops until the task is complete or a configurable run limit is hit.
- Implemented **persistent conversational memory** per session: stores last 20 messages in full, then automatically compresses older history using a lightweight model (Claude Haiku), keeping context relevant without blowing token budgets.
- Integrated **16+ LLM models** across OpenAI, Anthropic, and Google via a unified provider abstraction, letting users bring their own API key and choose their model (GPT-4o, Claude Sonnet 4, Gemini 2.5 Flash, etc.) per agent.
- Built a **customer-facing MCP server platform** exposing 1,500+ integration actions as AI-callable tools, compatible with Claude Desktop, Cursor IDE, and ChatGPT.

Platform & Infrastructure

- Designed an **event-driven system** with 50+ domain events powering real-time automation across 170+ integrations via WebSocket.
- Improved **API response time by 25%** through REST refactoring, Redis caching, and async job queues across 170+ integrations.
- Built **OttoKit Forms** from scratch: drag-and-drop builder, AI-powered form generation, secure public deployment, and automatic data sync to OttoKit Tables.
- Built **OttoKit Tables** from scratch: CSV import/export, fulltext search, filters, sorting, linked records, and plan-based row limits via background job processing.
- Built a **Global Variables** system with encryption for managing secrets securely across workflow executions.
- Identified and fixed **security vulnerabilities** including SSRF, XSS, open redirects, and CSS injection; improved platform accessibility to WCAG 2.2 Level AA.
- Built WordPress plugin integrations for Store Engine, LatePoint, and SureDash to support e-commerce and booking automation.

SureDash — Community engagement platform for user discussions and content management.

- Led **React to Next.js migration** from WordPress monolith, reducing page load time by 25% via code splitting, SSR, and lazy loading; improved Core Web Vitals scores across LCP, CLS, and FID.
- Built reusable component library with optimized PHP REST APIs, replacing legacy AJAX handlers and reducing frontend bundle size via tree-shaking and dynamic imports.
- Implemented **SSG** for static content and **SSR** for dynamic discussion threads, improving SEO and time-to-first-byte.
- Integrated authentication and authorization flows using secure session handling with Next.js middleware.

Projects

AI Agent Playground

[Live](#) [GitHub](#)

Multi-LLM agentic evaluation framework - compare how 7 models reason through the same prompt using live tool-calling.

- Built a shared agentic driver loop: stream a turn → execute tool calls → feed results back → loop - with live per-model status shown in the UI.
- Supports **7 LLM providers** (Gemini, Groq, Cerebras, OpenRouter, Mistral, Cohere, OpenAI) via two streaming adapters - one shared OpenAI-compatible adapter and a custom Gemini SSE adapter handling tool-call fragment accumulation.
- Implemented **4 client-side tools** (calculator, word counter, datetime, JSON formatter) with a single JSON Schema definition converted per-provider via `toOpenAITools` / `toGeminiTools` - tool errors return as strings so models can self-correct.
- Leaderboard tracks response time and tool call usage per model across sessions via `localStorage`.

Notion-Style Block Editor

[GitHub](#)

A Notion-inspired block-based rich text editor - fully client-side, no backend required.

- Built **9 block types** (paragraphs, headings H1–H3, bulleted & numbered lists, syntax-highlighted code, quote, divider) with a slash-command / picker for keyboard-driven block insertion and filtering.
- Implemented **drag-and-drop reordering** via `@dnd-kit`, floating inline formatting toolbar, and list nesting with Tab/Shift+Tab indentation and per-level auto-numbering.
- Multi-document sidebar with create, rename, and delete; autosaves to `localStorage`; exports to Markdown and PDF.
- Architected persistence through a single `storage.js` service layer, making backend swap-in a four-function change.

Education

2019 – 2023: B.Eng in Computer Science

Savitribai Phule Pune University, Pune, India

Graduated: June 2023

2017 – 2019: HSC (12th Grade), Science

St. George Jr. College, Nagpur, India

Completed: March 2019

Certificates

- Introduction to Artificial Intelligence (AI) – IBM ([Link](#))
- Generative AI: Introduction and Applications – IBM ([Link](#))
- Python Certificate of Accomplishment – HackerRank ([Link](#))
- Enterprise WordPress Security – WPVIP ([Link](#))

Achievements

- Solved 500+ DSA problems across multiple platforms.
- Solved 150+ LeetCode problems.
